

Thuya Eyelash Perming

Thuya Tint and Lash Perm products are manufactured in Spain. These products have met all the safety requirements of the Canadian government. This technique curls and shapes the lashes in order to enhance the natural curvature.

T0401 Eyelash Perm Kit (100 services excluding perm rods)

Permanent Gel – PH product slightly alkaline, in order to make it easier to shape hair. Apply a layer of the product and cover with plastic and towel. Close container after each use to avoid evaporation of product.

Neutralizer – It totally repairs the keratin chain, which means a longer lasting eyelash shape. Apply a layer of the product and cover with plastic and towel. Eyelash glue is non-aggressive natural latex glue. It sticks softly and loses stickiness with water. Apply along the root of the lash. Close container tight. The latex ammoniac disappears in contact with air.

Round circular fabric used to shape the lashes. Available in small, large and extra large. 30 units per pack.
